Office 2016 Deployment Tool

The Office 2016 Deployment Tool allows the administrator to customize and manage Office 2016 Click-to-Run deployments. This tool will help administrators to manage installations sources, product/language combinations, and deployment configuration options for Office Click-to-Run.

By default, Office 2016 installations that use Click-to-Run will download the Office product from the Internet, with full UI, and with automatic updates enabled.

Some administrators will need more control beyond the default Click-to-Run installation behavior in order to work best in their environments.

Using the Office Deployment Tool, an administrator may:

- Download an Office installation source to a network share location
- Configure an installation to use a network share as the installation source instead of the Internet
- Configure an installation to suppress all UI
- Configure whether Office will automatically update or not
- Configure which products and languages to install
- Remove Office Click-to-Run products

Administrators run the Office Deployment Tool at the command line. The tool creates a configuration file, which the administrator can modify to specify what the desired action is.
